Quentic – the online solution for an interconnected and mobile EHS and CSR management system

Quentic is one of the leading providers of Software as a Service (SaaS) solutions for Environment, Health & Safety (EHS) and Corporate Social Responsibility (CSR) for the European market. The company was founded by the managing directors Markus Becker, Sebastian Mönnich and Hardy Menzel in 2007 and is headquartered in Berlin, with branch offices in Germany, Austria, Switzerland, Finland, Belgium, Denmark, and the Netherlands. New offices in other European cities are coming soon. Quentic currently employs over 200 people worldwide. Users include over 650 companies, ranging from small and medium-sized businesses to globally active corporations. Customers like Siemens AG, MAN SE and BayWa AG use the software platform to strengthen their EHS and CSR management.

The Quentic Platform

Occupational safety has become a complex field of laws, obligations and norms that companies need to navigate. To act in compliance, companies need to document, evaluate and pass on a large amount of information. In practice, we often see different departments and locations taking different approaches, which leads to inconsistent data and duplicates that then need to be remerged. This not only requires a lot of additional and unnecessary effort, but also means that companies do not have access to the right information, indicators or documents when they need them.

Link data, connect stakeholders and get people engaged

Quentic networks data, connects all EHS and CSR stakeholders and generates enthusiasm across the entire field. The online platform includes 8 modules, namely Health & Safety, Risks & Audits, Hazardous Materials, Legal Compliance, Online Instructions, Processes, Environmental Management and Sustainability. The Quentic App adds to this by enabling mobile incident reporting in next to no time. Users can combine the individual modules to create a custom solution that best serves their needs. Interconnections throughout the system is of great value as well, strengthening collaborative efforts while enabling a big picture view of all company processes. Quentic is also well-suited to support companies working in compliance with ISO 14001 (environmental management), ISO 45001 (occupational health & safety) and ISO 50001 (energy management). DEKRA Assurance Services GmbH has confirmed this. The platform can assist with documentation, organization and evaluation, giving companies a clear map to navigate through the legal maze and reduce liability risk to a minimum. Projects can often blend together across departments, locations and even countries, but Quentic helps you keep company processes running efficiently and within legal parameters.

Improve workflows and involve participants as needed

Thanks to Quentic, makeshift individual solutions, chaotic list-keeping and endless spreadsheets are a thing of the past. Whether employee, manager, service provider or auditor, personalized overviews show every user what they need to know for their work. Evaluations and reports can be created with just a few clicks, and in-system data sharing and task allocation saves precious time. Quentic can depict company-specific structures like locations, facilities and site units just as they are, making the online solution helpful for both large corporations and mid-market companies. Quentic is already being used in over 50 countries. Internationally active companies benefit from the time and location independent nature of the SaaS solution, which also boasts 20 interface languages.

Quentic's core offerings for occupational health and safety

Health & Safety

- Organize and document health and safety protection efforts
- Manage risk assessments and operating instructions
- Record incidents/accidents and report them to your employers' liability insurance association

Users can efficiently document and evaluate risks with the Health & Safety module. To protect against accidents and health risks, determine safeguards directly in the system. It is also easy to go through the steps of a risk assessment in Quentic – thanks to offline functions that don't require direct system access. Operating instructions can be created easily with just a few clicks. Widely-used hazard statements and symbols are already built in to the platform. At a glance, user can see what qualifications colleagues possess and when the next round of instructions is due – tailored to fit various activities and roles. When an appointment needs to be planned, those responsible can easily set it up and invite participants to attend by email. Critical incidents and near misses can also be easily documented. To avoid similar problems in the future, cause analyses can immediately be started and corrective actions derived. If an accident does happen, users can effortlessly create a ready-to-send notice of accident and send it to the employers' liability insurance association – even from a smartphone. Evaluating accident indicators allows for a detailed internal overview and helps you to implement the correct preventative measures.

Quentic App

- EHS reporting from a smartphone, for both employees and external providers
- Usable even when offline

With the Quentic app, users can immediately report incidents while still at the scene and send the report to the responsible parties from a smartphone. Thanks to customizable forms and integrated photo functionality, things can always be reported in the desired format. Inspection results can be sent in instantly during an inspection, and employees have immediate access to current risk assessments while on site. The app works both online and offline and can therefore be used independently when needed. Mobile reporting makes EHS management vivid and accurate in real time.

Other modules

Online Instructions

- Instructions for employees and external service providers
- Multimedia content (SCORM-compatible) and comprehension tests

Hazardous Materials

- Fulfill obligations to establish, inform and protect
- Hazardous material index with GHS/CLP labels
- Hazardous good management and safety data sheets

Risks & Audits

- Support all process steps for internal and external audits
- Aspect and risk assessments, determining management programs

Legal Compliance

- Legal register, manage facilities and permits
- Organize and document technical inspections

Environmental Management

- Monitor resources, waste registers, correctly display disposal processes
- Evaluate indicators and incorporate them into environmental reports

Sustainability

- Assess company activities and their impact
- Reports and analysis of various indicators

Processes

- Depict process chains and guidelines for action
- Visualize workflows and connections

Quentic Services

In addition to its software product offering, Quentic also provides a comprehensive ranges of services to its customers and users. This ranges from intensive consulting for module selection, implementing the system at a company and assisting with national or international rollouts – always tailoring level of involvement to customers' wishes. Quentic also offers ready-to-use content like sample risk assessments, audit questions, question catalogs and extensive content for online instructions, as well as access to the consulting and content of Quentic's international partner network.

At the core of Quentic's services lies the concept of exchange and a network of knowledge and people. This is why users, partners and employees keep up an active dialogue in the Quentic Community and meet up at the yearly HS2E (Health, Safety, Sustainability & Environment) forum. This specialist conference is hosted by Quentic and has since established itself as a platform for continuing education and networking for EHS specialists, sustainability managers and all other users of Quentic's software offering. The 2020 German language meeting for EHS

practitioners will take place from March 25th-26th in Berlin. Quentic extended invitations to its first international meetup in Finland in September 2019. The 2nd annual international HS2E forum will take place in fall 2020.
